

# PROJECT MANAGER FOR TAILORING DIGITAL WATER SOLUTIONS

## AVK HOLDING A/S

Would you like to influence the digital way of addressing water infrastructure? We invite you join a global organisation focusing on growth, continuity and innovation, where you will get the opportunity for personal and professional development.

### About us

AVK Smart Water develops and delivers digital solutions for drinking water distribution. Solutions that help water utilities optimise operations, resource consumption and customer service. AVK is a large Danish company with strong roots in the industry and a team of experienced specialists working closely together to create value for our customers.

As part of our continued growth, we are looking for a committed, structured and development-oriented Project Manager that can combine and ensure progress in development and good collaboration across borders, and actively contribute to the development work itself.

### About your new role

As a Project Manager, you will be responsible for a portfolio of development projects within digital products and solutions for the global water sector. You will play a key role in ensuring the progress, quality and economy of projects - from concept to development, testing and production preparation.

You will have experienced colleagues to spar with and get great support for technical knowledge, internal systems and processes. But you must bring the ability to optimise projects, understand and communicate digital solutions and drive activities from sketching in 3D, seeking feedback from potential customers, establishing the BOM, financial follow-up, quality assurance, technical documentation and all the way to customer value creation.

You will work closely with colleagues in Denmark and Italy as well as partners in several countries. The projects range widely and involve system architecture, mechanical design, integration of sensors and electronics, electrical design, IoT architecture and software development.

The role requires that you are able to communicate in Danish and English both written and spoken.

### Your main responsibilities will be to:

- Lead development projects from idea to finished product - focusing on quality, time and cost
- Ensure effective coordination between multi-country development and between mechanical, electrical and software development
- Contribute to the development of intuitive and user-friendly products (UX/UI)

- Take ownership of translating customer needs into technical requirements and ensure clear documentation for use across the project
- Establish BOMs and other critical documents
- Create 3D sketches for conceptualisation
- Support production preparation and handover to operations/production

### Your profile

We imagine that you have a technical education at bachelor's or master's level - for example in mechatronics, electronics, mechanical engineering or similar - combined with solid experience as a project manager. You have good business acumen and are able to translate customer needs into concrete, market-relevant solutions.

We would prefer it if you have:

- Experience with technical development projects, preferably with hardware/software integration
- An understanding of IoT solutions and digital products
- Interest in the customer's experience with the solution from installation to daily use (UX)
- Ability to collaborate across cultures and disciplines
- Experience with project management, project plans, documentation and project finances

### We offer

In this role, you get the opportunity to shape the development of digital solutions that contribute to a more sustainable way of handling water supply. You will be in close collaboration with experienced colleagues who help you enter the industry and open doors.

We also offer an international work environment with a high level of diversity and collaboration across countries, and a culture of initiative, innovation and collaboration.

### Interested?

If you have questions about the role, please contact our CDO for Product Development, Lars Enevoldsen, on +45 40309526 or [larene@avk.dk](mailto:larene@avk.dk)

Send your application and your CV to: [techservice@avk.dk](mailto:techservice@avk.dk). We are hiring now and will continuously review applications.

### About AVK

AVK's core business area is the development and production of valves, hydrants and accessories.

Our products are part of vital infrastructure for clean drinking water, safe distribution of natural gas, efficient wastewater management from households and industry, and fire protection.

The AVK Group is family-owned with headquarters in Galten, Denmark.

With a turnover of DKK 9 billion in 2024 and more than 5,000 employees at 100+ production and sales companies worldwide, AVK is a significant player in our industry.

AVK wants to be a responsible and trustworthy company balancing economic, environmental and social conditions. Sustainable initiatives are fundamental in our production and we have a healthy and safe working environment.
